

Saving your tyres, fuel and time

enTIRE PressureNet is our latest offering, saving your tyres, fuel and time. enTIRE PressureNet utilising enTIRE Technologies and Advantage PressurePro™ equipment is a simple to operate yet invaluable tool in managing the tyre pressures within your fleet.

The system works by constantly checking the pressures of the tyres on your vehicles. Readings are sent back to the server and stored within a database

Reduce Physical Inspections of tyre pressures

With **enTIRE PressureNet** you can reduce or even eliminate the majority of your manual pressure checks. The system will send you alerts regarding out of range pressures that you can respond to directly, instead of checking your whole fleet.

No communication costs

A big advantage of **enTIRE PressureNet** is that it can communicate with your Wi-Fi network directly (or optionally the lan port in some in vehicle comms devices), therefore bypassing telecommunications carriers altogether.

Simple to Install

Our system is simple to install, as the sensors are external to the tyre. Minimal hardware is required within the cabin of the vehicle to collect the data and send back to the processing server.

Regular Summary Email

You will receive a regular summary email at a frequency that you choose, advising you of the status of your fleet at that point in time, including a summary of issues since the last summary.

Alerts

Alerts are sent to you as soon as out of range data is obtained by our server. The alert contains the information necessary to allow you to take immediate corrective action. Alerts are currently email based and will soon also extend to sms.

Figure 1 - enTIRE PressureNet Warning email for low pressure.

Configurable Alerts

You can configure the types of alerts received for each user of the system.

Simple, Clear history of your pressures

A website is provided that shows a simple history of the pressures on each vehicle, over time to show trends on 'problem' vehicles.

Connects into the award winning enTIRE Tyre & Rim Management System

enTIRE PressureNet can communicate directly with enTIRE Wheels to allow you to see your pressure readings directly from enTIRE. Further to this recommended pressures set within enTIRE will be communicated back to enTIRE PressureNet to set alerting parameters.
